

Bowed Tendons In Horses

Bowed Tendons In Horses

James M. Casey, D.V.M. M.S. Equine Sports Medicine, Dentistry, & Surgery. TENDON INJURIES. Tendons are the cable or strap-like structures that attach muscles to the bones on which they set. Most tendons are short and rarely damaged. However, the long tendons of the flexor tendons are most important and it is these that are discussed below.

Tendon Injuries Horses | Bowed Tendons

Lower Leg Lameness and Injury - Horses and Ponies

Q4) What should I look for in front leg conformation? Click on the image for a larger view. Ideally, when viewed from the side, you should be able to draw a straight line through the center of the bones of the forearm, knee, cannon and bulb of the heel. The front legs support 60-65% of the horse's weight. They are more prone to stress and injury than the hind legs.

Tendinopathy, also known as tendinitis or tendinosis, is a type of tendon disorder that results in pain, swelling, and impaired function. The pain is typically worse with movement. It most commonly occurs around the shoulder (rotator cuff tendinitis, biceps tendinitis), elbow (tennis elbow, golfer's elbow), wrist, hip, knee (jumper's knee), or ankle (Achilles tendinitis).

Tendinopathy - Wikipedia
