

Endocrine Problems In Cancer

Endocrine Problems In Cancer

Occasionally, in one of the endocrine glands, a change in the DNA (known as a mutation) causes abnormal cells to grow, and a tumor forms. Most endocrine tumors are benign (not cancerous), but a few will become cancerous. Collectively, endocrine cancers are much less common than other kinds of cancer.

Endocrine Cancer: Symptoms, Diagnosis and Treatment ...

Treatment of endocrine system cancer depends on the underlying type of cancer and the staging of the disease, as well as the age and other health problems of the patient. Treatments include: Medical management of any hormonal or electrolyte imbalances due to tumor over or undersecretion prior to surgery. Surgery - for tumor removal. Radiotherapy.

Endocrine Problems after Childhood Cancer Treatment

Wikipedia says a cancer survivor is an individual with cancer of any type, current or past, who is still living. Another definition that I like that I found on Internet, at this web site here, is anyone who has been diagnosed with cancer from diagnosis to end of life is considered a cancer survivor. The endocrine issues involve many organs.

POE - Endocrine Issues in Cancer Survivors, Part 1 - MD ...

A neuroendocrine tumor (NET) is a rare type of tumor that arises from specialized body cells called neuroendocrine cells. These cells have traits of both nerve cells and hormone-producing cells, and release hormones into the blood in response to signals from the nervous system. Because a neuroendocrine tumor arises from cells that produce hormones, the tumor can also produce hormones.
