Glaucoma is a disease of the eye in which fluid pressure within the eye rises; if left untreated, the patient may lose vision and even become blind.

Glaucoma: Types, causes, and symptoms - Health News

Cataracts and glaucoma are two separate problems. Cataracts can be cured by having them removed with a relatively benign surgical procedure. Commonly, however a combined procedure can be performed at the time of cataract extraction, thereby, hopefully getting the glaucoma under control.

Glaucoma Questions and Answers

Medication. Glaucoma is usually controlled with eyedrop medicine. Used every day, these eye drops lower eye pressure. Some do this by reducing the amount of aqueous fluid the eye makes.

Glaucoma Treatment - American Academy of Ophthalmology

Glaucoma continues to be a major public health problem. It is the second leading cause of blindness worldwide after cataracts. In the United States, primary open-angle glaucoma is the most common form of glaucoma and is the leading cause of irreversible blindness in African Americans. This disease is typically asymptomatic until advanced visual field loss occurs.

Other cannabinoids and cannabinoid-like chemicals have also been shown to lower the intraocular pressure (IOP). [4] Smoking marijuana was first reported to lower IOP in 1971. [5] The problem, however, is that it only works for a few hours during the time someone is "high". [6] Among those people I know who enjoy the feeling of being "high" I doubt any of them would want to spend every ...
