### **Mass Spectrometry In Drug Metabolism**

Mass spectrometry (MS) is an analytical technique that measures the mass-to-charge ratio of ions. The results are typically presented as a mass spectrum, a plot of intensity as a function of the mass-to-charge ratio. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Glycosidases. Molecular tools to characterize protein glycosylation. Includes PNGase F, Endo H and Fetuin. Mass Spectrometry Reference Reagents. Reagents and yeast or human extracts for monitoring liquid chromatography (LC) and mass spectrometry (MS) instrument performance, and to assist in method development and optimization.

### **Mass Spectrometry - Promega Corporation**

Liquid chromatography-mass spectrometry (LC-MS) is an analytical chemistry technique that combines the physical separation capabilities of liquid chromatography (or HPLC) with the mass analysis capabilities of mass spectrometry (MS). Coupled chromatography - MS systems are popular in chemical analysis because the individual capabilities of each technique are enhanced synergistically.

Improve protein sample prep workflow with rapid digestion, improved sequence coverage and more data from minimal sample material. Proteases for optimal digestion of proteins in mass spectrometry and other applications, include Trypsin, Trypsin/Lys-C, rLys-C, Lys-C, Asp-N and more. ProteaseMAX™ Surfactant is available for improved in-gel digestion and protein solubilization.
