Spinal Stenosis Diagnosis. Diagnostic imaging studies for patients with any type of spinal stenosis include either an MRI scan or a CT scan with myelogram (using an X-ray dye in the spinal sac fluid), and sometimes both. Plain CT scans can better identify bony causes of spinal stenosis, but cannot give the same detail for soft tissue causes of stenosis such as disc bulges, disc herniations ...

Spinal stenosis describes a condition of narrowing in the spine and this narrowing can result in spinal nerves becoming pinched or trapped. As a consequence of spinal stenosis, leg cramps may arise because the nerves controlling the muscles in the legs may be compressed as the spinal spaces narrow. Solving the riddle of nocturnal leg cramps may then involve an MRI of the spine.

Anesthesia or anaesthesia (from Greek "without sensation") is a state of controlled, temporary loss of sensation or awareness that is induced for medical purposes. It may include analgesia (relief from or prevention of pain), paralysis (muscle relaxation), amnesia (loss of memory), or unconsciousness. A patient under the effects of anesthetic drugs is referred to as being anesthetized.
